About Tenable ........................................................................................................................... 20
Welcome to Tenable Security Center for Lieberman

Caution: Tenable's integration app for Lieberman is deprecated and is not supported beyond version 7.0. Contact BeyondTrust for the available alternatives or look towards another Tenable-supported PAM solution integration. For a list of supported integrations, see Tenable's Partner Page and Integrations documentation page.

This document provides information and steps for integrating Tenable Security Center with Lieberman.

Security administrators know that conducting network vulnerability assessments means getting access to and navigating an ever-changing sea of usernames, passwords, and privileges. By integrating Tenable Security Center with Lieberman, customers have more choice and flexibility.

The benefits of integrating Tenable Security Center with Lieberman include:

- Credentials update directly in Tenable Security Center, requiring less management.
- Reduced time and effort documenting where credentials are stored in the organizational environment.
- Automatic enforcement of security policies in specific departments or business unit requirements, simplifying compliance.
- Reduced risk of unsecured privileged accounts and credentials across the enterprise.
Integrations

The Lieberman system can be configured using either Windows or SSH. Full database support is also provided. Click the corresponding link to view the configuration steps.

Windows Integration

SSH Integration

Database Integration

Add Credential to the Scan
Windows Integration

Before you begin:

**Caution:** You must create an [Explicit Account](#) under Delegation > Delegation Identities in Lieberman. For additional information on how to create an Explicit Account, see the Explicit Accounts section in the Lieberman RED Identity Management Administrator's Guide.

To integrate with Windows:

1. Log in to Tenable Security Center.
2. In the top navigation bar, click **Scanning**.
   
   A drop-down appears.
3. Click **Credentials**.
   
   The **Credentials** window opens.
4. Click the + **Add** button.

The **Add Credential** window opens.
5. In the **Windows** section, click **Lieberman**.

The **Add Credential** configuration page appears.
6. In the top section, enter a descriptive **Name** (required), **Description** (optional), and **Tag** (optional).

7. Configure each field for **Windows** authentication. See [Tenable Security Center User Guide](#) to get detailed descriptions for each option.

8. Click **Save**.

9. Next, follow the steps for **adding the credential to a scan**.
SSH Integration

Before you begin:

**Caution:** You must create an **Explicit Account** under **Delegation > Delegation Identities** in Lieberman. For additional information on how to create an Explicit Account, see the Explicit Accounts section in the **Lieberman RED Identity Management Administrator's Guide**.

To integrate with SSH:

To configure a **SSH** credentialed network scan with Lieberman:

1. Log in to Tenable Security Center.
2. In the top navigation bar, click **Scanning**. A drop-down appears.
3. Click **Credentials**. The **Credentials** window opens.
4. Click the **+ Add** button.

The **Add Credential** window opens.
5. In the SSH section, click **Lieberman**.

The **Add Credential** configuration page appears.
6. In the top section, enter a descriptive **Name** (required), **Description** (optional), and **Tag** (optional).

7. Configure each field for **SSH** authentication. See the [Tenable Security Center User Guide](#) to get detailed descriptions for each option.

8. Click **Save**.

9. Next, follow the steps for adding the credential to a scan.
Configure Database Integration

Tenable Security Center provides full database support for Lieberman. Enable the plugins in the scanner to display them in the output.

To configure database integration:

1. Log in to Tenable Security Center.
2. Click **Scanning > Credentials**.
   
   The **Credentials** page appears.
3. Click **+Add** at the top of the screen.
   
   The **Add Credential** page appears.
4. In the **Database** section, click **Oracle Database**.
   
   The **Add Credential** page appears.
5. In the **Name** field, type a descriptive name.
6. (Optional) In the **Description** field, type a description.
7. (Optional) In the **Tag** drop-down, select a tag.
8. In the **Authentication Method** drop-down, select **Lieberman**.
The Lieberman options appear.

9. Configure each option for the Oracle Database authentication. See the Database Credentials section in the Tenable Security Center User Guide to get detailed descriptions for each option.

10. Click Submit.

What to do next:

- Next, follow the steps to Add a Credential to a Scan.
Enable Database Plugins

To enable database plugins:

   See the chart for database plugin types and corresponding IDs.

<table>
<thead>
<tr>
<th>Plugin Type</th>
<th>Plugin ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>MSSQL</td>
<td>91827</td>
</tr>
<tr>
<td>Oracle</td>
<td>91825</td>
</tr>
<tr>
<td>MySQL</td>
<td>91823</td>
</tr>
<tr>
<td>PostgreSQL</td>
<td>91826</td>
</tr>
</tbody>
</table>

2. Click Save.
Add a Credential to a Scan

To add a Lieberman credential to a scan:

1. In the top navigation bar in Tenable Security Center, click **Scans**. A drop-down appears.

2. Select **Active Scans**.

![Active Scans Window](image)

The **Active Scans** window appears.

3. In the top right corner, click **+Add**.
The Add Active Scan window appears.

4. In the left column, click Credentials.

The Scan Credentials section appears.
5. In the **Scan Credentials** section, click +**Add Credential**.

A drop-down appears.

6. Select the system type.

The **Select Credential** option appears.
7. Click **Select Credential**.

A drop-down appears.

8. Select the previously created credential.

9. Enter information for the **General**, **Settings**, **Targets**, and **Post Scan** sections.

10. Click **Submit**.
