Lifecycle Support Phase Definitions

The following definitions apply to the lifecycle phases listed in the matrices below. These definitions clarify the level of support, pricing, and updates provided during each phase of a release. This document focuses on RELEASES not products; nothing contained herein implies EOL of a PRODUCT. Product EOL's are handled via their own communication channels and processes.

For a full list of support definitions and lifecycle policy information, see the Tenable Lifecycle Policy.

Standard Support

- **Duration**: Typically 18 months to 2 years from the General Availability (GA) date.
- **Description**: This is the fully active phase of the product version.
- **Inclusions**:
    - Full Technical Support: Access to Tenable support team via phone, chat, and email.
    - Updates & Maintenance: Regular delivery of bug fixes, maintenance releases, and new features.
    - Plugin Updates: Full access to plugin feeds and updates.
    - Platform Support: Qualification on new platforms (e.g., new OS versions) is typically performed during this phase.

Extended Support

- **Duration**: 6 months following the End of Standard Support (EoSS) date.
- **Description**: A transition period designed to allow customers time to upgrade to a newer supported release.
- **Policy**:
    - Limited Updates: It is left to the discretion of Tenable to determine if security or emergency patches will be released after the EoSS milestone.
    - No New Features: No new features or non-critical bug fixes are backported to versions in this phase.
    - Migration Focus: Support efforts are primarily focused on assisting customers in upgrading to a Standard Support version.

End of Life (EOL)

- **Description**: The product **version** is retired.
- **Policy**: No technical support, no software updates, and no security patches are provided. Customers must upgrade to a supported version to receive service.
