Overview

Tens of thousands of CVEs are published each year and the amount is expected to continue to grow year over year. The NIST National Vulnerability Database maintains an [NVD Dashboard](#) where you can see the great volume of exposures across the organizational landscape.

At Tenable, our goal is to help our customers determine their cyber exposure gap as quickly and accurately as possible. We use a multitude of approaches to deliver the best possible vulnerability detection to our customers, and we constantly fine-tune our approach as the threat landscape evolves to ensure optimal coverage. The globally-distributed Tenable Research organization creates and maintains plugins used within all Tenable Vulnerability Management products, which are distributed multiple times daily through our global feed service.

This document explains how Tenable Research prioritizes vulnerabilities for development and gives guidance for some of the regular programs we address.

Vulnerability Program Coverage

Tenable Research uses a variety of scoring methods, thousands of data sources, internal telemetry, and artificial intelligence to ensure we're covering exposures with the most potential impact to our customers. Some of the most influential factors for prioritization include:

- The severity and exploitability of the vulnerability itself including factors such as whether it is being exploited in the wild or will likely be, the ease of access, and availability of public exploits.
- The prevalence and criticality of the vulnerable software across our customer base.
- The availability of a patch from the vendor or other suggested mitigations (alternative deployment modes, configuration).
- The ability to procure and deploy the device for development.
- Whether it is a named vulnerability or one that is likely to be high profile/likely to garner the attention of attackers.

Additionally, the Tenable Security Response Team continuously monitors the exposure landscape and surface analysis of the most critical exposures and zero days to our customers in the form of Cyber Exposure Alerts and entries into the Tenable Research Blog. Their efforts also initiate a rapid response process for development of content across the Tenable platform.

Outside of the prioritization and rapid response process, there are several programs that Tenable Research tracks and implements coverage for on an ongoing basis. These include:

- Information Assurance Vulnerability Management (IAVM) Notices
- Oracle Critical Patch Updates (CPU)
- Microsoft Patch Tuesday
- CISA Known Exploited Vulnerabilities

Vulnerability Coverage Timelines

Coverage timelines vary depending on a number of factors. In general, fully automated plugin coverage is delivered within 12-24 hours. For the vulnerability programs listed under the [Vulnerability Program Coverage](#) section, coverage is typically delivered within 24-72 hours. For semi-automated plugins and direct checks, coverage for critical and high CVSS vulnerabilities is manually completed as soon as possible.

In some cases, internal telemetry may indicate a need to update a plugin for identification of the affected device before vulnerability detection can be implemented. The update is typically due to a refresh or rebrand of the device. This update may extend the generally provided timelines. If a device must be procured for development and testing, it may be operationally prohibitive to develop the plugins or extend the generally provided timelines.

If you do not see a plugin within the targeted timeframe, first check the [Tenable Plugins Pipeline](#) to see if the team is actively engaged with the vulnerability. If the CVE is not listed, a suggestion may be filed within the [Product Suggestions Portal](#). More details on that process can be found when logging into the portal.

Tip: Log into the portal using your Tenable Community credentials.

Automated Vulnerability Coverage

Automated coverage is highlighted in the tables below:

- [Fully Automated Plugins](#)
- [Semi-Automated Plugins](#)

See the [Vulnerability Coverage Timelines](#) section for estimated timelines.

Tip: For even more information about additional coverage Tenable provides, see the [Vulnerability Program Coverage](#) section.

ABB	Relion / SAM600 Series (650, 670, REX640)
ABB	RTU500 Series
ABB	800xA Control System
ABB	Freelance AC 700F / AC 900F
ABB	AC500 PLC
ABB	GMS600 / PWC600
ABB	M2M Gateway / Ethernet Series
ABB	AFS Series Switches
ABB	CP635 HMI
ABB	PCM600 / IED Connectivity Packages
ArecontVision	MegaDome IP Cameras
AxisCommunication	Axis IP Cameras
Bachmann	M1 Automation System
Barco	ClickShare Devices

Beckhoff	TwinCAT System (ADS, RT, BSD)
Beckhoff	CX9020 Embedded PC
Bosch	Bosch Security Systems
B&R Automation	Automation Studio / SDM
Brother	HL / MFC / DCP Printer Series
Carrier Corporation	i-Vu Control System
Cisco	Nexus Series Switches (1000V, 3000, 5000, 7000, 9000)
Cisco	NX-OS / FXOS Operating Systems
Cisco	ASR 9000 Series Routers
Cisco	Unified IP Phones (3900, 6800, 7800, 7900, 8800, 8900, 9900)
Cisco	Unified Computing System (UCS)
Cognex	In-Sight OPC Server
Dahua	IP Cameras / DVRs / NVRs
Danfoss	Ak-SM800A
Dell	iDRAC (6, 7, 8, 9, 10)
Dell	Laser Printer Series (2335dn, 2355dn, 3000cn)
Eaton	Power Xpert Meter
Eaton	9000X Drive
Eaton	Easye4 Plc
Eaton	SMP Gateway
Eaton	UPS Systems (5P, 9PX)
Elspec	G4000 Series Power Quality Analyzers
Elspec	G5 Digital Fault Recorder

Emerson	DeltaV Distributed Control System
Emerson	Ovation OCR400 Controller
EndRun Technologies	Sonoma Time Server
Epson	WF Series Printers
Fanuc	Robot Controllers
Festo	CECC / CECX Controllers
General Electric (GE)	PACSystems (RX3i, CPE100, CPE300, CPE400)
General Electric (GE)	Multilin / UR Family
General Electric (GE)	Reason S20 Ethernet Switches
Generex	CS141 UPS Adapter
GeoVision	GV-Series IP Cameras
HanwhaVision	IP Cameras / NVRs / Web Viewer
Hikvision	IP Cameras / DVRs / NVRs
Hirschmann	HiOS / HiSecOS Switches
Honeywell	Safety Manager
Honeywell	Experion PKS / LX / PlantCruise
Honeywell	Safety Manager
Honeywell	PM43 Industrial Printers
HP	OfficeJet Pro / PageWide Printers
HP	Integrated Lights-Out (iLO)
HP	LaserJet Printers
Illustra	Pro Gen 4 Cameras
IRZ	RUH2 / Mobile Routers

Janitza	UMG Power Quality Measuring
JohnsonControls	Metasys / Facility Explorer
Konica Minolta	Bizhub Multifunction Printers
Korenix Technology	JetNet Switches
Lexmark	Lexmark Printer Series
Meinberg	LANTIME Time Servers
MettlerToledo	IND780 Weighing Terminal
MikroTik	RouterOS / RouterBOARD
Mitsubishi Electric	MELSEC Series (iQ-R, iQ-F, Q, L, F, WS)
Mitsubishi Electric	MELIPC Series
Mitsubishi Electric	SmartRTU / Inea ME-RTU
Mobotix	S14 IP Camera
Moxa	EDR Industrial Routers (810, G902, G903)
Moxa	NPort Serial Device Servers (5000, 6000, IA, W series)
Moxa	MGate Protocol Gateways
Moxa	Mb3Xxx Series Protocol Gateways
Moxa	ioLogik Remote I/O (E1200, E2200, 2500, 4000)
Moxa	EDS / IKS / PT Managed Switches
Moxa	AWK Wireless AP/Bridge/Client
Nexans	FTTO GigaSwitch
Omron	Sysmac Series (CS, CJ, CP, NJ, NX)
Omron	Machine Automation Controllers
Panasonic	WV-S2231L Camera

PhoenixContact	PLCnext Control (AXC F 2152)
PhoenixContact	Inline (ILC) PLCs
PhoenixContact	Emalytics Controller
QNAP Systems	QTS / QES / QuTS hero Operating Systems
