Welcome to Lumin Exposure View

The Tenable One Exposure Management Platform helps organizations gain visibility across the modern attack surface, focus efforts to prevent likely attacks, and accurately communicate cyber risk to optimize business performance.

The platform combines the broadest vulnerability coverage spanning IT assets, cloud resources, containers, web apps, and identity systems, and builds on the speed and breadth of vulnerability coverage from Tenable Research and adds comprehensive analytics to prioritize actions and communicate cyber risk.

The Tenable One platform enables you to:

- Get comprehensive visibility of all assets and vulnerabilities, whether on-premises or in the cloud, and understand where they are exposed to risk.

- Anticipate threats and prioritize efforts to prevent attacks by using generative AI and the industry's largest data set of vulnerability and exposure context.

- Communicate exposure risk to business leaders and stakeholders with clear KPIs, benchmarks, and actionable insights.

- Leverage the broadest vulnerability coverage spanning IT assets, cloud resources, containers, web apps, and identity systems.

- Integrate with third-party data sources and tools for enhanced exposure analysis and remediation.

Tip: For additional information on getting started with Tenable One products, check out the Tenable One Deployment Guide and review the following customer education materials:

- Tenable One Introduction (Tenable University)

Tenable One is a package that includes the following products:

<table>
<thead>
<tr>
<th>Product</th>
<th>Tenable One Package</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tenable Vulnerability Management</td>
<td>Tenable One Standard, Tenable One Enterprise</td>
</tr>
<tr>
<td>Legacy Tenable Cloud Security</td>

</tbody>
</table>

**Use Cases**

This user guide covers the following interfaces, which can be used alone or in tandem to support these common use cases:

<table>
<thead>
<tr>
<th>User Type</th>
<th>Use Case</th>
</tr>
</thead>
<tbody>
<tr>
<td>CISO/Executives</td>
<td>Utilize <strong>Lumin Exposure View</strong> to:</td>
</tr>
<tr>
<td></td>
<td>• Quickly quantify your overall enterprise risk exposure and identify which areas need further investigation.</td>
</tr>
<tr>
<td></td>
<td>• Create custom exposure cards to view data based on specific business contexts.</td>
</tr>
<tr>
<td></td>
<td>• Measure and prioritize risk exposure progress or regression.</td>
</tr>
<tr>
<td></td>
<td>• Easily communicate important risk information to teams and include in presentations.</td>
</tr>
<tr>
<td></td>
<td>• Understand how effective your program is via the <strong>Remediation Maturity</strong> metric.</td>
</tr>
<tr>
<td>Security Practitioner</td>
<td>Utilize <strong>Attack Path Analysis</strong> section to:</td>
</tr>
<tr>
<td></td>
<td>• Evaluate the impact of insecure assets and communicate these insecurities to appropriate parties.</td>
</tr>
<tr>
<td></td>
<td>• Proactively identify hidden security issues within my</td>
</tr>
</tbody>
</table>
Both CISO/Executives and Security Practitioners | Utilize the **Tenable Inventory** to:
--- | ---
Utilize existing tags or create new tags that can be used to create custom exposure cards. | View and manage all assets, regardless of their source.

For more information, see [Get Started with Lumin Exposure View](#).

## Get Started with Lumin Exposure View

Tenable recommends following these steps to get started with Lumin Exposure View data and functionality.

**Tip:** For additional information on getting started with Tenable One products, check out the [Tenable One Deployment Guide](#) and review the following customer education materials:

- [Tenable One Introduction (Tenable University)](#)

### Prepare

- Familiarize yourself with the Lumin Exposure View **key terms**.
- Review the [Tenable One Licensing Quick-Reference Guide](#).
- Familiarize yourself with the [categories and data metrics](#) within Lumin Exposure View.
- Review the Tenable One [Example Workflow](#).

### License, Access, and Log In

To use Tenable One, you purchase licenses for assets: resources identified by—or managed in—your Tenable products. Each Tenable One product has a different asset type. For more information, see the [Tenable One Licensing Quick-Reference Guide](#).

To acquire a license:
1. Determine the interface that best suits your business objectives. For more information, see Use Cases.

2. Contact your Tenable representative to purchase the appropriate package.

To access and log in to Lumin Exposure View:

Follow the Log in to Lumin Exposure View steps.

Configure Lumin Exposure View for Use

- Configure your Lumin Exposure View settings.
- View your data sources.

Assess Your Exposure

Review your CES and perform analysis:

- Access Lumin Exposure View, where you can:
  - View, create, and manage cyber exposure cards.
  - View CES and CES trend data.
  - View Remediation SLA information.
  - View News posts related to vulnerability events.

Key Terms

The following key terms apply to the Lumin Exposure View user interface.

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Active Directory (AD)</td>
<td>Attack Path Analysis integrates AD data from Tenable Identity Exposure.</td>
</tr>
<tr>
<td>Asset</td>
<td>Any IT or security element in your organization such as user accounts, computers, and software. The Discover section represents an asset as a node in the graph.</td>
</tr>
<tr>
<td><strong>Asset Exposure Graph</strong></td>
<td>A visualization of an attack path from multiple assets down to one asset.</td>
</tr>
<tr>
<td>-------------------------</td>
<td>--------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>Asset Exposure Score (AES)</strong></td>
<td>Tenable calculates a dynamic AES for each asset on your network to represent the asset's relative exposure as an integer between 0 and 1000. A higher AES indicates higher exposure.</td>
</tr>
<tr>
<td><strong>Asset Vulnerability Rating (AVR)</strong></td>
<td>An aggregation of all Vulnerability Priority Rating (VPR) scores for vulnerabilities detected on an asset.</td>
</tr>
<tr>
<td><strong>Benchmark</strong></td>
<td>A group of scores to which you can compare your scores and assess your performance.</td>
</tr>
<tr>
<td><strong>Blast Radius</strong></td>
<td>A visualization of one or more attack paths from one asset to multiple other assets.</td>
</tr>
<tr>
<td><strong>CES Trend</strong></td>
<td>A measurement that defines how your CES improves or regresses over time.</td>
</tr>
<tr>
<td><strong>Chief Information Security Officer (CISO)</strong></td>
<td>The head of cybersecurity for a company. A CISO can use the Exposure View to quickly quantify the overall enterprise risk exposure, measure its progress or regression over time and easily communicate impact and ROI to key stakeholders.</td>
</tr>
<tr>
<td><strong>Choke Point Priority</strong></td>
<td>A choke point is a place where potential attack paths merge together before reaching a critical asset. Attack Path Analysis uses Choke Point Priority as a prioritization metric for attack techniques based on the number of attack paths exploiting the attack, the number of critical assets it leads to, and complexity of the attack. Attack Path Analysis categorizes priority levels as <strong>Low</strong>, <strong>Medium</strong>, <strong>High</strong>, and <strong>Critical</strong>.</td>
</tr>
<tr>
<td><strong>Cyber Exposure Score (CES)</strong></td>
<td>Your CES quantifies the relative risk of your organization based on the threat exposure and criticality of your licensed assets. CES values range from 0 - 1000, where higher values indicate higher exposure and higher risk.</td>
</tr>
<tr>
<td><strong>Data Source</strong></td>
<td>A product that feeds data into Tenable One (for example, Tenable</td>
</tr>
<tr>
<td><strong>Evidence</strong></td>
<td>The empirical data from different data sources confirming the feasibility of a Step as part of an attack path.</td>
</tr>
<tr>
<td><strong>Exposure Card</strong></td>
<td>An Exposure card represents the incoming data from your configured tags and data sources. It aggregates and normalizes the data to provide a visualization of your Cyber Exposure Score (CES) and other metrics. Users can create custom cards, or use Tenable-provided cards to gain insight and guidance on what areas need their attention most.</td>
</tr>
<tr>
<td><strong>Exposure Card View</strong></td>
<td>The section of the Exposure View that includes data about the selected exposure card. This section includes CES, trend, Remediation SLA, and business context information.</td>
</tr>
<tr>
<td><strong>Exposure View</strong></td>
<td>A holistic and unified view combining internal and external data sources to provide a complete view of risk in a singular location.</td>
</tr>
<tr>
<td><strong>Finding</strong></td>
<td>A feasible implementation of a technique or sub-technique in one or more attack paths that an adversary can leverage. Each finding has a Choke Point Priority that determines its urgency and potential impact.</td>
</tr>
<tr>
<td><strong>Industry Benchmark</strong></td>
<td>A benchmark based on members of your Tenable-assigned industry to which you can compare your scores and assess your performance.</td>
</tr>
<tr>
<td><strong>MITRE ATT&amp;CK®</strong></td>
<td>MITRE ATT&amp;CK® is a globally accessible knowledge base of adversary tactics and techniques based on real-world observations. The MITRE ATT&amp;CK® knowledge base is used as a foundation for the development of specific threat models and methodologies in the private sector, in government, and in the cybersecurity product and service community.</td>
</tr>
<tr>
<td><strong>Node Exposure Score (NES)</strong></td>
<td>A metric produce by Tenable One to understand the blast radius exposure of a node. This metric considers the Vulnerability Priority Rating of all vulnerabilities on the asset as well as other relationships such as software installed, sub-networks to which the asset belongs, internet exposure, etc.</td>
</tr>
<tr>
<td><strong>Path Priority Rating</strong></td>
<td>A prioritization metric for attack paths based on the exposure of the source, criticality of the target and the number of steps of the attack path.</td>
</tr>
<tr>
<td><strong>Population Benchmark</strong></td>
<td>A benchmark based on members of the entire population to which you can compare your scores and assess your performance.</td>
</tr>
<tr>
<td>--------------------------</td>
<td>----------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>Query Builder</strong></td>
<td>A customizable visualization of one or more attack paths based on configurable source and target assets.</td>
</tr>
<tr>
<td><strong>Query Library</strong></td>
<td>Predefined queries that visualize scenarios of potential attack paths based on real-world attacks.</td>
</tr>
<tr>
<td><strong>Operational Technology (OT)</strong></td>
<td>Tenable One integrates OT data from OT Security.</td>
</tr>
<tr>
<td><strong>Security Practitioner</strong></td>
<td>A Security Practitioner can use the Asset Inventory to evaluate the impact of unsecured assets, proactively identify hidden security issues in assets relationships, and quickly locate areas where a breach or risk is likely to happen.</td>
</tr>
<tr>
<td><strong>Service Level Agreement (SLA)</strong></td>
<td>A control by which you can identify whether assets comply with customer security requirements.</td>
</tr>
<tr>
<td><strong>Step</strong></td>
<td>A feasible implementation of a technique or sub-technique in an attack path that an adversary can leverage. The Discover section illustrates a step as a &quot;bracket&quot; between two or more assets.</td>
</tr>
<tr>
<td><strong>Technique / Sub-Technique</strong></td>
<td>Represents &quot;how&quot; an adversary achieves a tactical goal by performing an action. For example, an adversary can dump credentials to achieve credential access.</td>
</tr>
<tr>
<td><strong>Tags</strong></td>
<td>A way to group assets by business context. For example, you can group assets by product, permissions, business owner, etc.</td>
</tr>
<tr>
<td><strong>Vulnerability Management (VM)</strong></td>
<td>Tenable One integrates VM data from Tenable Vulnerability Management and Tenable Security Center.</td>
</tr>
<tr>
<td><strong>Web Application Scanning (WAS)</strong></td>
<td>Tenable One integrates web app scanning data from Tenable Web App Scanning.</td>
</tr>
</tbody>
</table>

**Example Workflow**
The following scenario describes a common use case where the Lumin Exposure View, , and Attack Path Analysis interfaces work in conjunction to assist a company in analyzing and prioritizing their data.

**Getting Started**

Joe logs in and lands on the **Workspace** landing page, where he can see all of his Tenable products and the Tenable One pages he can access. Since he needs to see his exposure risks globally, he selects **Lumin Exposure View**. Joe then lands on the **Global Lumin Exposure View**, where he can see Vulnerability Management, Tenable Identity Exposure, Tenable Web App Scanning, and Cloud data unified into a single score. He may be wondering, “Which category is driving the score?”. For this, in the **CES** section, he can select **Per Category > Computing Resources**, and filter all the data on the page.

As Joe reviews the metrics to prepare for his next executive meeting, he can change the date ranges so that he can see what’s changed over time and high level indicators of why the changes occurred. Since there was a significant change in the score last week, he decides to comment on the **CES Trend** section to ask his coworker, Rachel, for more details.

**Prioritize**

Now that Joe has a better understanding of the score and which category is driving it, his next question is “Which business owners (i.e., tags) do we need to chase?”. Now, he can look at the **Tag Performance** section to quickly see which tags are the highest contributors to his score. This helps Joe prioritize his focus. Again, if he needs more details or has an action item for Rachel, Joe can comment directly on the **Tag Performance** section in the **Exposure View**. Rachel can then drill down into the **Tag Details** to get further information.

Since there’s been a priority in process and products, Joe decides to review how his internal **Remediation SLA** efficiency has improved. By expanding the date range to include the past 6 months, he can report on the positive trend in addressing the crucial risks within the set number of days. Seeing how he missed his target SLA efficiency last week, Joe can look at what’s outside of SLA (how many risks, how many days, and which tags) to determine what he needs to follow up on.

He wants to share this **Exposure View** with his entire team, so he exports and emails to the team with a high level summary and action items.

Joe takes note of the businesses he wants to focus on within the **Tag Performance** widget, and then creates a custom exposure card for each one.
Customize

Now, Joe takes a look at his Exposure Card Library. At a glance, he can see his General and Custom exposure cards, where he can also see a high level preview of each card’s CES and CES trend.

Should he need to create a Lumin Exposure View with a different segment, he may ask Rachel to help create a custom tag within the Asset Inventory. Rachel creates a tag that is data agnostic (so he can mix and match assets for a tag) and then a custom card using the new tag. She shares this new Lumin Exposure View with Joe. Since Joe needs more details, he clicks on the Top Affecting tags link and jumps directly to the where he can see all the assets associated with this tag. Here, he can also view asset details, and can even navigate directly to the data source product for more information. Rachel realizes that the static tag should actually be a dynamic tag, so she edits the tag configuration.

Incidents and Actions

Thomas is on the InfoSec team and is responsible for any incidents. His main focus is the Attack Path Analysis section, where he can build a custom query highlighting his most sensitive assets. He can then interact with the attack path data and proactively see potential attack paths and techniques. Here, Thomas can answer the following key questions:

- In my environment, what are all possible attack paths between two assets or asset types?
- In my environment, what are all possible attack paths that leverage a specific technique?
- What assets are in jeopardy if one specific asset is compromised? (Blast Radius)
- How do all assets in my network affect one specific asset in my environment? (Asset Exposure)
- Where is an asset within the attack path?
- How critical is an asset?

Lumin Exposure View Metrics

The following metrics are used to assess data within Lumin Exposure View:

Data Timing
Data within Lumin Exposure View refreshes on the following cadence:

- **Asset Data** — Asset information is updated every time the asset is seen as part of a scan.
- **Tag Application** — When a tag is first created, it can take several hours to assign the tag to the appropriate asset, depending on the number of assets and the tag's rules.
- **Tag Reevaluation** — Every 12 hours, Lumin Exposure View automatically reevaluates tags to ensure they apply to newly discovered assets, and are removed from any inactive assets.

**Cyber Exposure Score (CES)**

Lumin Exposure View calculates a dynamic CES that represents exposure risk as an integer between 0 and 1000, based on the Asset Exposure Score (AES) values for assets. Higher CES values indicate higher risk.

**Note:** Lumin Exposure View does not include assets older than 90 days in your CES.

<table>
<thead>
<tr>
<th>CES Category</th>
<th>CES Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>High</td>
<td>650 to 1000</td>
</tr>
<tr>
<td>Medium</td>
<td>350 to 649</td>
</tr>
<tr>
<td>Low</td>
<td>0 to 349</td>
</tr>
</tbody>
</table>

**Asset Exposure Score (AES)**

Lumin Exposure View calculates a dynamic AES for each asset on your network to represent the asset's relative exposure as an integer between 0 and 1000. A higher AES indicates higher exposure.

**Note:** Lumin Exposure View does not calculate an AES for unlicensed assets.

<table>
<thead>
<tr>
<th>AES Category</th>
<th>AES Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>High</td>
<td>650 to 1000</td>
</tr>
<tr>
<td>Medium</td>
<td>350 to 649</td>
</tr>
<tr>
<td>Low</td>
<td>0 to 349</td>
</tr>
</tbody>
</table>
Asset Criticality Rating (ACR)

Tenable assigns an ACR to each asset on your network to represent the asset's relative criticality as an integer from 1 to 10. A higher ACR indicates higher criticality.

<table>
<thead>
<tr>
<th>ACR Category</th>
<th>ACR Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>Critical</td>
<td>9 to 10</td>
</tr>
<tr>
<td>High</td>
<td>7 to 8</td>
</tr>
<tr>
<td>Medium</td>
<td>4 to 6</td>
</tr>
<tr>
<td>Low</td>
<td>1 to 3</td>
</tr>
</tbody>
</table>

Because Tenable Vulnerability Management calculates ACR values every 24 hours, you may need to wait up to 24 hours to view the ACR after scanning the asset on your network.

Lumin Exposure View Categories

Lumin Exposure View products refer to data sources as Categories. For more information, see Data Sources.

Additionally, Lumin Exposure View uses specific icons to represent these within the user interface.

<table>
<thead>
<tr>
<th>Category</th>
<th>Icon</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cloud Resources</td>
<td>![Cloud Icon]</td>
</tr>
<tr>
<td>Web Applications</td>
<td>![Web Icon]</td>
</tr>
<tr>
<td>Identity Exposure</td>
<td>![Identity Icon]</td>
</tr>
<tr>
<td>Computing Resources</td>
<td>![Computing Icon]</td>
</tr>
</tbody>
</table>

**Note:** Currently, Tenable One only supports the ingestion of Legacy Tenable Cloud Security data. For more information, contact your Tenable Representative.

Lumin Exposure View Scoring Explained

The building blocks for the Cyber Exposure Score (CES) in the Tenable One Exposure Management Platform are similar to those used for years in Tenable products (e.g., Tenable Vulnerability...
Management, Tenable Lumin). These mechanisms have to date only been used for vulnerability management data. Tenable One expands these concepts into new realms of the attack surface: **Web Applications** (Tenable Web App Scanning), **Cloud Resources** (Legacy Tenable Cloud Security), and **Identity** (Tenable Identity Exposure).

For more information on Tenable One scoring, see the *Tenable One Scoring Explained Quick Reference Guide*.

**Log in to Lumin Exposure View**

To log in to Lumin Exposure View:

1. In a supported browser, navigate to [https://cloud.tenable.com/](https://cloud.tenable.com/). The login page appears.
2. Type your **Username** and **Password** credentials.
3. Click **Login**.
   
   The **Workspace** page appears.
4. Click the Lumin Exposure View tile.
   
   The Lumin Exposure View interface appears.

**Navigate Lumin Exposure View**

Lumin Exposure View includes several helpful shortcuts and tools that highlight important information and help you to navigate the user interface more efficiently:

**Resource Center**

The **Resource Center** displays a list of informational resources including product announcements, Tenable blog posts, and user guide documentation.

To access the Resource Center:

1. In the upper-right corner, click the ✉️ button.

   The **Resource Center** menu appears.
2. Click a resource link to navigate to that resource.

**Settings Icon**

Click the button to navigate directly to the Settings page, where you can configure your system settings.

The Settings menu gives you access to user and settings options.

To access the Settings menu:
1. In the upper-right corner, click the button. The **Settings** menu appears.

2. Click an item to navigate to that system configuration page.

---

**Workspace**

When you log in to Tenable, the **Workspace** page appears by default. On the **Workspace** page, you can switch between your Tenable applications or set a default application to skip the **Workspace** page in the future. You can also switch between your applications from the **Workspace** menu, which appears in the top navigation bar.

**Important:** Tenable disables application tiles for expired applications. Tenable removes expired application tiles from the **Workspace** page and menu 30 days after expiration.

---

**Open the Workspace Menu**

To open the **Workspace** menu:

1. From any Tenable application, in the upper-right corner, click the button.

   The **Workspace** menu appears.
2. Click an application tile to open it.

View the Workspace Page

To view the Workspace page:

1. From any Tenable application, in the upper-right corner, click the button.

   The **Workspace** menu appears.

2. In the **Workspace** menu, click **Workspace**.
The **Workspace** page appears.

---

**Set a Default Application**

When you log in to Tenable, the **Workspace** page appears by default. However, you can set a default application to skip the **Workspace** page in the future.

By default, users with the **Administrator**, **Scan Manager**, **Scan Operator**, **Standard**, and **Basic** roles can set a default application. If you have another role, contact your administrator and request the **Manage** permission under **My Account**. For more information, see [Custom Roles](#).

To set a default login application:

1. Log in to Tenable.
   
   The **Workspace** page appears.

2. In the top-right corner of the application to choose, click the ![button](image)

   A menu appears.
3. In the menu, click **Make Default Login Page**.

This application now appears when you log in.

Remove a Default Application

To remove a default login application:

1. Log in to Tenable.

   The **Workspace** page appears.

2. In the top-right corner of the application to remove, click the : button.

   A menu appears.

3. Click **Remove Default Login Page**.

   The **Workspace** page now appears when you log in.

**User Account Menu**

The user account menu provides several quick actions for your user account.

1. In the upper-right corner, click the blue user circle.

   The user account menu appears.
2. Do one of the following:

- Click **My Profile** to configure your own user account. You navigate directly to the **My Account** settings page. See **My Account** for more information.
- Click **Sign out** to sign out of Lumin Exposure View.
- Click **What's new** to navigate directly to the Lumin Exposure View Release Notes.
- Click **View Documentation** to navigate directly to the Lumin Exposure View User Guide documentation.

**Log out of Lumin Exposure View**

To log out of Lumin Exposure View:

1. Access the **user account** menu.
2. Click **Sign Out**.
Lumin Exposure View

The Lumin Exposure View in Tenable One allows you to quickly view your global CES, see its changes and trends over time, view important benchmark comparisons, and assess your overall risk. The Lumin Exposure View includes several tools that help you understand:

- Your overall security posture as it relates your business context
- The criticality of your assets
- The effectiveness of your efforts to remediate vulnerabilities across your workspace

An exposure card represents the incoming data from your configured tags and data sources. It aggregates and normalizes the data to provide a visualization of your Cyber Exposure Score (CES) and other metrics. Users can create custom cards, or use Tenable-provided cards to gain insight and guidance on what areas need their attention most.

Note: Because exposure card scores are globally calculated, role-based access control (RBAC) does not affect card data in the Lumin Exposure View.

To access the Exposure View:
1. In the upper-left corner of the page, click the button.

2. In the Analytics section, click Lumin Exposure View.

The Lumin Exposure View page appears.

In the Lumin Exposure View, you can:

- **View** the available exposure cards for which you can view data via the Exposure Cards tab.
- **View** your CES for Tenable-provided datasets, or view the CES for a custom set of data via a custom exposure card.
- **View** CES trend data for any exposure card.
- **View** Remediation Service Level Agreement (SLA) data.
- **View** Tag Performance data.
- **Comment** on the Exposure View or its widgets.
- **Export** the Exposure View or its widgets.
- **View** Tenable blog posts related to vulnerability events via the News tab.

**Tip:** When scrolling the Exposure View, in the upper-right corner, click Back to Top to return to the top of the page.

### View the Exposure Cards Library

An exposure card represents the incoming data from your configured tags and data sources. It aggregates and normalizes the data to provide a visualization of your Cyber Exposure Score (CES) and other metrics. Users can create custom cards, or use Tenable-provided cards to gain insight and guidance on what areas need their attention most.

**Note:** Because exposure card scores are globally calculated, role-based access control (RBAC) does not affect card data in the Lumin Exposure View.

The Exposure Cards library in the Lumin Exposure View allows you to view the following types of exposure cards:

<table>
<thead>
<tr>
<th>Card type</th>
<th>UI Image</th>
</tr>
</thead>
</table>

A Tenable-provided **Global Exposure Card** that shows your **Overall Score** based on all internal and external data within Lumin Exposure View.

Tenable-provided **Category Cards** based on data from the following categories:

- **Computing Resources** — All data from Tenable Vulnerability Management sources.
- **Identities** — All data from Tenable Identity Exposure sources.
  
  **Important:** The **Identities** card is only visible if you've enabled the **Use the Tenable Cloud Service** option in Tenable Identity Exposure.

- **Cloud Resources** — All data from Legacy Tenable Cloud Security sources.

  **Note:** Currently, Tenable One only supports the ingestion of Legacy Tenable Cloud Security data. For more information, contact your Tenable Representative.

- **Operational Technology** — All data from Tenable OT Security sources.
- **Web Application** — All data from Tenable Web App Scanning sources.

  **Note:** The widgets and data on each card are
determined by the type of data within each category.

Data from user-created custom exposure cards.

To view the **Exposure Cards** library:

1. Access the **Lumin Exposure View**.
2. On the left side of the page, click the **Exposure Cards** tab.

A list of Tenable-provided and user-created exposure cards appears.

3. Click on an exposure card to view:
   - The **CES** for the card.
   - The **CES trend** for the card.
   - **Remediation SLA** data for the card.
   - **Tag performance** information for the card.

**Create a Custom Exposure Card**

In Lumin Exposure View, you can create a custom exposure card to specify the categories for which you want to see data. Once you create a custom exposure card, you can then select the card in the **Exposure Cards** library to view its data in the **Lumin Exposure View**. You can create a custom exposure card through the **Exposure Cards** library.
Before you begin:

- Create a tag to apply to the card.

To create a custom exposure card:

1. Access the Lumin Exposure View.
2. On the left side of the page, click the Exposure Cards tab.
   
   A list of exposure cards appears.
3. At the top of the Exposure Cards library or in the Custom Cards section, click the New Custom Card button.
   
   The Create Card page appears.

4. In the Card Details section, in the Card Name box, type a name for the exposure card.
5. In the Card Details section, in the Card Description box, type a name for the exposure card.
6. In the Adding Tags box, select the tags you want to use to provide data for the exposure card:
a. (Optional) Use the Search box to search for specific tags.

b. Select the check box next to each tag you want to use to provide data for the exposure card.

c. (Optional) to view only the tags you've added to the exposure card, click Show Selected.

7. Click Save.

The Lumin Exposure View saves the exposure card and adds it to the Custom Cards section of the Exposure Cards library.

Edit an Exposure Card

To edit an exposure card:

1. Access the Exposure Cards library.

   A list of exposure cards appears.

2. Click the card you want to edit.

   The card information appears in the Lumin Exposure View.

3. At the top of the Lumin Exposure View, click the button.

   A menu appears.

4. Click Edit.

   The edit card page appears.
5. On the **Card Settings** tab, make any desired changes:
### Card Settings

<table>
<thead>
<tr>

6. On the **Edit Tags** tab, make any desired changes to the tags used to provide data for the exposure card:
   a. (Optional) Use the **Search** box to search for specific tags.
   b. (Optional) Use the **Filter** top filter the list of tags by specific criteria.
   c. (Optional) Add or remove any tag values or categories to or from the exposure card.
   d. (Optional) To view only the tags you've added to the exposure card, click **Show Selected**.

7. Click **Save**.

The **Lumin Exposure View** saves your changes to the exposure card.

**Delete a Custom Exposure Card**
To delete a custom exposure card:

1. Access the Exposure Cards library.
   
   A list of exposure cards appears.

2. In the Custom section, click the custom card you want to edit.
   
   The card information appears in the Lumin Exposure View.

3. At the top of the Lumin Exposure View, click the button.
   
   A menu appears.

4. Click Edit.
   
   The edit card page appears.
5. At the bottom of the page, click **Delete**.

   A confirmation message appears.

6. Click **Delete card**.

   The **Lumin Exposure View** deletes the custom exposure card.

**View Your CES**
By default, the Lumin Exposure View displays your Global Cyber Exposure Score. You can select a specific card via the Exposure Cards library to view your Cyber Exposure Score for that card. CES data is available for the following categories:

- Tenable-provided exposure cards, which include:
  - **Global** — All internal and external data within Lumin Exposure View.
  - **Computing Resources** — All data from Tenable Vulnerability Management sources.
  - **Identities** — All data from Tenable Identity Exposure sources.
  - **Web Application** — All data from Tenable Web App Scanning sources.
  - **Cloud Resources** — All data from Legacy Tenable Cloud Security sources.
- Data from user-created custom exposure cards.

**Note:** Because exposure card scores are globally calculated, role-based access control (RBAC) does not affect card data in the Lumin Exposure View.

**Note:** Lumin Exposure View does not include assets older than 90 days in your CES.

To view your CES for an exposure card:
1. Access the **Exposure Cards** library.

   A list of exposure cards appears.

2. Select the exposure card for which you want to view your CES.

   The **Exposure View** displays the CES details for the selected card.

While viewing the CES details for a card, you can:

- In the upper-left corner of the page, view the time at which the **Lumin Exposure View** last updated the CES.

- In the upper-left corner of the page, click **Details** to view the following exposure card information:
  
  - The number of assets associated with the exposure card.
    
    - Click the asset number to view the assets directly in the **Asset Overview**.
  
  - The user that created the exposure card.
  
  - The date and time at which the exposure card was created.
  
  - Where applicable, the card description.

- View a graphical representation of your CES grade as it compares to your industry and the total population:
  
  - To view your total CES regardless of the data source, below the circle graph, click **Total**.
  
  - To view your CES separated based on the source of the data, below the circle graph, click **Per Category**.

  The CES graph splits into sections that represent each category. For more information, see **Lumin Exposure View Metrics**.
Within the CES graph, click an individual category name to view additional category information, connected assets, and to filter the Lumin Exposure View by
To view the top tags driving your score, below the circle graph, click **Per Tag**.

**Note:** The Lumin Exposure View displays up to 10 tags within the graph.

The CES graph splits into sections that represent each tag. For more information on tags, see **View Your Tag Overview**.
Overall score

A

105/1000

- One test : test
- .io • OS : All
- One lucone : green
- One lucone : critical...
- One &@123 : &@1234
- One test : ith_batch
- One lucone : misc

Total Per Category Per Tag
Within the CES graph, click an individual tag name to view additional tag information, connected assets, and tag details.

- To the right of the CES graph, view a small blurb that:
  - Indicates how your score compares to the baseline target.
  - Identifies the performance of your categories. For example, this blurb may explain that you have two critical categories.

- On the right side of the page, in the Benchmarks section, view how your CES compares to others is your industry and in the total population.

- In the Change section, view how your CES has changed within the last 30 days.

- In the Asset Risk Breakdown section, view tiles that indicate your asset risk:
  - The Critical Risks tile shows the percentage of your assets with associated vulnerabilities of critical severity, as well as the data source(s) of those assets.
  - The High Risks tile shows the percentage of your assets with associated vulnerabilities of high severity, as well as the data source(s) of those assets.
The **Medium/Low Risks** tile shows the percentage of your assets with associated vulnerabilities of medium or low severity, as well as the data source(s) of those assets. Click any tile to navigate to the **Tenable Inventory** filtered by the asset severity type you selected.

**Caution:** Data in the **Asset Risk Breakdown** section is based on your Vulnerability Priority Rating (VPR). As a result, if you configure your **Tenable Vulnerability Management vulnerability severity** setting to use CVSS, data in this section may be inconsistent.

**Note:** Since an asset can have multiple risks across all severities, the sum of the percentages in the **Asset Risk Breakdown** section may exceed 100%.

### View CES Trend

The **Trend** section of the **Lumin Exposure View** shows how your CES has trended over time. You can also view information about specific events that have contributed to your CES.

**Note:** Because exposure card scores are globally calculated, **role-based access control** (RBAC) does not affect card data in the Lumin Exposure View.

To view your CES trend for an exposure card:
1. Access the **Exposure Cards** library.

   A list of exposure cards appears.

2. Select the exposure card for which you want to view the CES trend.

   The **Lumin Exposure View** updates based on your selection.

3. Scroll down to the **Trend** section.

   In the **Trend** section, you can:

   • View a graphical representation of your CES trend over time.

   • At the top of the trend graph, select a timeframe for which you want to view your CES trend:

     - **1m** – View your CES trend over the previous month.
     - **3m** – View your CES trend over the previous 3 months.
     - **6m** – View your CES trend over the previous 6 months.
     - **1y** – View your CES trend over the previous year.
     - **Custom** date range – Use the calendar tool to select a specific date range over which to view your CES trend.

   • At the bottom of the trend graph, click an event marker. In the **Events** section, the **Lumin Exposure View** displays specific information about that event and how it affects your CES.

**View Remediation SLA Data**

The **SLA** section of the **Exposure View** shows Remediation Service Level Agreement (SLA) data for Lumin Exposure View. SLA represents the acceptable time frame between when a finding is discovered and when it fixed or remediated. Here, you can visualize risks by severity and by compliance with your SLAs to determine how well you are aligning to your organization's policy.

**How is my SLA calculated?**

Lumin Exposure View calculates your SLA efficiency by comparing the number of active findings inside your SLA versus the number of active findings that are inside AND outside your SLA:

Findings inside / Findings (Inside + Outside)
Lumin Exposure View includes all active findings in SLA calculations, but only includes remediated findings if they were fixed during the remediation timeframe. To determine if a finding is inside or outside of your SLA, compare the following finding properties:

- All active findings: current-date / first-observed-at
- Remediated findings: last-fixed-at / first-observed-at

The data in the SLA applies to all exposure cards within the Lumin Exposure View and are only based on vulnerability findings. Findings without a Vulnerability Priority Rating (VPR) do not count towards SLA calculations.

**Tip:** You can configure your SLA in Lumin Exposure View through the Lumin Exposure View. For more information, see Configure Lumin Exposure View Settings.

**Note:** Because exposure card scores are globally calculated, role-based access control (RBAC) does not affect card data in the Lumin Exposure View.

To view remediation SLA data:

1. Access the Exposure Cards library.
   
   A list of exposure cards appears.

2. Select the exposure card for which you want to view Remediation SLA data.
   
   The Lumin Exposure View updates based on your selection.
3. Scroll down to the **Remediation SLA** section.

In the **Remediation SLA** section, you can:

- Select a timeframe for which you want to view the Remediation SLA data:
  - **1m** — View Remediation SLA data for the previous month.
  - **3m** — View Remediation SLA data for the previous 3 months.
  - **6m** — View Remediation SLA data for the previous 6 months.
  - **1y** — View Remediation SLA data for the previous year.

All data within the **Remediation SLA** section updates accordingly, including the **SLA Efficiency** and **SLA Breakdown** subsections.

- Select a severity level by which you want to filter Remediation SLA data:
- Critical Risks — View only risks that have a critical severity.
- High Risks — View only risks that have a high severity.
- Medium Risks — View only risks that have a medium severity.
- Low Risks — View only risks that have a low severity.

All data within the Remediation SLA section updates accordingly, including the SLA Efficiency and SLA Breakdown subsections.

- In the SLA Efficiency trend graph, view SLA trend metrics for a specific range of dates.

- View your SLA Breakdown:
Click a risk group type to filter the **SLA Breakdown** data:

- **All Risks** — All risks regardless of remediation status.
- **Remediated Risks** — Only remediated risks.
- **Non-remediated Risks** — Only non-remediated risks.

View a graphical representation of your **Risk distribution**, which shows the number and percentage of risks that fall **Inside SLA** and **Outside SLA**.

View a graphical representation of your **Risk distribution in days**, which shows your risk distribution based on the number of days your risks are inside or outside the SLA.

View the number of **Total risks**.

View the number of **Avg. remediation days**.

**Note:** This metric only applies to findings that have been fixed or remediated.

- Click **Show business context** to view the category impact and business context tag details:

  ![Business Context](image)

  - In the **Categories** section, view the percentage of risks outside of your SLA for each data category in Lumin Exposure View.
  - In the **Top Affecting Tags** section, view the top tags outside of your SLA, listed in descending order.

**View Tag Performance**

The **Tag Performance** section of the **Lumin Exposure View** shows how the tags applied to your assets affect your CES. You can use this information to answer the following questions:

- What tags are part of my current **Lumin Exposure View**?
- Which tags drive my CES?
- Which tags should I focus on to improve my scores?
Note: Because exposure card scores are globally calculated, role-based access control (RBAC) does not affect card data in the Lumin Exposure View.

To view your tag performance:

1. Access the Exposure Cards library.
   
   A list of exposure cards appears.

2. Select the exposure card for which you want to view the tag performance.
   
   The Lumin Exposure View updates based on your selection.

3. Scroll down to the Tag Performance section.

   ![Tag Performance section](image)

In the Tag Performance section, you can do the following:

- View the number of tags within your Lumin Exposure View instance.

  - To see a list of all tags, click See all tags.
    
    A list of your tags appears in Category: Value pair format.
Click on a tag *Category:Value* pair to view additional details:

- **Tag Type** — The tag type (e.g., static).
- **Data Source** — The application in which the tag was created. For more information, see [Data Sources](#).
- **Show connected assets** — Click to view a list of assets to which the tag is applied. Lumin Exposure View redirects you to the [Asset Overview](#) filtered by the selected tag.
- **Show tag details** — Click to view all details for the tag. The Lumin Exposure View redirects you to the [Tag Details](#) page within the [Tenable Inventory](#).

- View a plot point graph of your tags based on the percentage of their contribution.

  **Tip:** Click on a plot point to highlight the corresponding tile below.

  **Note:** Because an asset can be tagged with more than one tag, tags can overlap, causing your total percentage to exceed 100%.

- In the **Active Filter** section, click on a letter grade score to filter all data in the [Tag Performance](#) widget by tags that fall under the selected score.

- View tiles that highlight the performance of each tag. On any tile, you can:
  - View the name of the *Category:Value* pair.
  - View a letter grade representation of your CES grade as it compares to your industry and the total population.
  - View the **Tag contribution** percentage (i.e., the percentage of your CES score that comes from assets to which this tag is applied).
  - View a graphical representation of the CES trend over the last 7 days.
  - View the tag CES.
  - View the **Number of assets** to which the tag is applied.
  - View the **Categories** to which the tag belongs. For more information, see [Lumin Exposure View Metrics](#).
Click **View tag details page** to navigate directly to the **Tag Details** page within the Tenable Inventory.

To the right of the tiles, click the > button to scroll through available tiles.

**View News Events**

The **News** section of the **Lumin Exposure View** lists Tenable blog posts related to vulnerability events. These posts highlight the background of the vulnerability as well as potential impact.

To view news events:

1. Access the **Lumin Exposure View**.
2. On the left side of the page, click the **News** tab.
   
   A list of news events appears.
3. (Optional) Use the **Search** box to search for a specific news event.
4. (Optional) Click an event type button in the **Filters** section to filter the list of news events.
5. In the left panel, in the **Articles** section, click a post to expand the full details of the event.
View Comment Notifications

When someone comments on the Lumin Exposure View, a notification appears in the Comments window. For more information about commenting on the Lumin Exposure View, see Comment on the Lumin Exposure View.

To view comment notifications:

1. Access the Lumin Exposure View.

2. In the upper-right corner, click the button.

   The Comments window appears and shows your unseen comments and replies.

3. (Optional) To reply to a comment, click on the comment.

   The Comments pane appears and displays the selected comment.

   a. In the text box, type your comment.

   b. (Optional) To include a snapshot of the section on which you want to comment, select the Include snapshot check box.

   c. Click the button.

   The Lumin Exposure View posts your reply. Depending on their permissions and notification settings, the Lumin Exposure View notifies other users about your comment.

Configure Lumin Exposure View Settings

You can configure how data appears within the Lumin Exposure View, including system defaults and benchmarks, layouts, and data sorting.

To configure your Lumin Exposure View settings:

1. Access the Exposure Cards library.

2. In the upper-right corner, click the button.

   The Lumin Exposure View Settings page appears.
3. (Optional) Configure settings in the following sections:
### Exposure Card Library

<table>

</tbody>
</table>
To set the SLA efficiency target percentage:

4. Click Save.

The **Lumin Exposure View** saves your configuration updates and applies any changes.

### Export Lumin Exposure View Data

You can export **Lumin Exposure View** data in the following ways:

- Export the entire **Exposure View** in .pdf format
- Export a single section of the **Lumin Exposure View** in .png format.

To export the entire Lumin Exposure View:

1. Access the **Lumin Exposure View**.
2. In the upper right corner, click the button.

A menu appears.
3. Click ☐️ Create Report.

The **Lumin Exposure View** downloads the export file to your computer. Depending on your browser settings, your browser may notify you that the download is complete.

To export a single section of the Lumin Exposure View:

1. Access the **Lumin Exposure View**.
2. Scroll to the section of the **Lumin Exposure View** that you want to export.
3. Click the ☐️ button.

The **Lumin Exposure View** downloads the export file to your computer. Depending on your browser settings, your browser may notify you that the download is complete.

**Share the Lumin Exposure View**

You can share the exposure card data from custom exposure cards with other users within your Lumin Exposure View instance. This allows you to forward all data associated with an exposure card for analysis and prioritization.

**Before you begin:**

Ensure the user with which you want to share has the appropriate access.

**To share exposure card data:**

1. Access the **Lumin Exposure View**.
2. In the **Exposure Cards** library, select the custom exposure card you want to share.
3. Click **Share ▼**.

The **Share Exposure Card** window appears.
4. In the search box, type the email address of the user or users with which you want to share the exposure card data.

**Tip:** Below the search box, in the **People with access** section, you can view which users have access to the data.

5. In the drop-down menu, select the access you want to grant to the user with which you are sharing the exposure card data. For example, if you want to allow the user to comment on the data, select **can comment**.

6. Click **Share**.

The Lumin Exposure View shares the exposure card data with the selected users. Selected users receive notification emails.

**Comment on the Lumin Exposure View**

You can comment on any section within the Exposure View. Depending on their permissions and notification settings, users within your Lumin Exposure View instance can view your comments. For more information, see View Comment Notifications.

To comment on the Lumin Exposure View:

1. Access the Exposure View.

2. Do one of the following:
• In the upper-right corner of the view, click the button.

• Scroll to the section on which you want to comment and click the button.

The **Comments** pane appears.
Tue Jun 21 2022

- Cyber Exposure Score

Looks great!

Commenting on Cyber Exposure Score

Leave a comment or add others by using @

Include snapshot
3. In the text box, type your comment.

4. (Optional) To include a snapshot of the section on which you want to comment, select the Include snapshot check box.

5. Click the button.

The Lumin Exposure View posts your reply. Depending on their permissions and notification settings, the Lumin Exposure View notifies other users about your comment. For more information, see View Comment Notifications.
Access the Settings Menu

The Settings menu gives you access to user and settings options.

To access the Settings menu:

1. In the upper-right corner, click the button.

   The Settings menu appears.
2. Click one of the following options:

- **System Settings** — View and manage settings for your container.
- **Data Sources** — View all products feeding data into the Lumin Exposure View interface.
- **License Information** — View your license information.
- User Management — View and manage all users, groups, and permissions.
- Roles — View and manage your Lumin Exposure View roles.
- Authentication — View and manage your user authentication settings.
- Activity Logs — View user activity logs.

System Settings

The System Settings option in the Settings menu directs you to the Settings page, where you can interact with all system settings options.

**Note:** These settings are managed directly within Tenable Vulnerability Management. When you access this section, you are automatically redirected to the Tenable Vulnerability Management user interface.

To access the Settings page:

1. Access the Settings menu.
2. Click System Settings.

   The Settings page appears. For more information, see Settings within the Tenable Vulnerability Management User Guide.

Data Sources

A data source is any product that feeds data into the Lumin Exposure View interface. By default, Lumin Exposure View automatically ingests data from any Tenable product for which you have a license. On the Data Sources tab, you can view details for each data source.

To view the Data Sources page:

1. Access the Settings menu.
2. Click Data Sources.
The **Data Sources** page appears.

On the **Data Sources** page, you can view the following information:

<table>
<thead>
<tr>
<th>Column</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Data Source</strong></td>
<td>The product feeding data into the Lumin Exposure View interface.</td>
</tr>
<tr>
<td><strong>Description</strong></td>
<td>A description of the data source.</td>
</tr>
<tr>
<td><strong>Category</strong></td>
<td>The category to which the data source belongs. For more information, see <a href="#">Lumin Exposure View Metrics</a>.</td>
</tr>
</tbody>
</table>

### Data Timing

Data within Lumin Exposure View refreshes on the following cadence:

- **Asset Data** — Asset information is updated every time the asset is seen as part of a scan.

- **Tag Application** — When a tag is first created, it can take several hours to assign the tag to the appropriate asset, depending on the number of assets and the tag's rules.

- **Tag Reevaluation** — Every 12 hours, Lumin Exposure View automatically reevaluates tags to ensure they apply to newly discovered assets, and are removed from any inactive assets.

### License Information

The **License Info** option in the **Settings** menu directs you to the **License** page, where you can view license information.
Note: These settings are managed directly within Tenable Vulnerability Management. When you access this section, you are automatically redirected to the Tenable Vulnerability Management user interface.

To access the License page:

1. **Access** the **Settings** menu.
2. Click **License Info**.

   The **License** page appears. For more information, see [View License Information](#) within the Tenable Vulnerability Management User Guide.

User Management

The **User Management** option in the **Settings** menu directs you to the **Users** page, where you can interact with all user management options.

Note: These settings are managed directly within Tenable Vulnerability Management. When you access this section, you are automatically redirected to the Tenable Vulnerability Management user interface.

To access the Users page:

1. **Access** the **Settings** menu.
2. Click **User Management**.

   The **Users** page appears. For more information, see [Users](#) within the Tenable Vulnerability Management User Guide.

Roles

Roles allow you to manage privileges for major functions and control which Lumin Exposure View resources users can access.

Note: These settings are managed directly within Tenable Vulnerability Management. When you access this section, you are automatically redirected to the Tenable Vulnerability Management user interface.

When you create a user, you must select a role for that user that broadly determines the actions the user can perform. For more information, see **Users**.
Caution: If you don't have two-factor authentication configured, be sure to disable the Two-Factor Required toggle when creating a user. Failure to do so can cause the user interface to display incorrectly for the user.

Note: You can further refine user access to specific resources by assigning permissions to individual users or groups. For more information, see Permissions.

The Lumin Exposure View interface supports the following role types:

- Administrator — Has all permissions and privileges, is responsible for setting up the account, and knows the organization's architecture. They can create groups to organize different business units, and add and manage users on the account.

- Custom — Has custom applied privileges specific to organizational needs. For more information, see the following documentation in the Tenable Vulnerability Management User Guide:
  - Custom Roles
    - Create a Custom Role
    - Duplicate a Role
    - Edit a Custom Role
    - Delete a Custom Role
  - Export Roles

Authentication

The Authentication option in the Settings menu directs you to the My Account page, where you can interact with all authentication options.

Note: These settings are managed directly within Tenable Vulnerability Management. When you access the this section, you are automatically redirected to the Tenable Vulnerability Management user interface.

To access the My Account page:

1. Access the Settings menu.

2. Click Authentication.
The **My Account** page appears. For more information, see **My Account** within the *Tenable Vulnerability Management User Guide*.

### Activity Logs

The **Activity Logs** option in the **Settings** menu directs you to the **Activity Logs** page, where you can view activity log information.

**Note:** These settings are managed directly within Tenable Vulnerability Management. When you access this section, you are automatically redirected to the Tenable Vulnerability Management user interface.

To access the System Settings page:

1. Access the **Settings** menu.
2. Click **Activity Logs**.

   The **Activity Logs** page appears. For more information, see **Activity Logs** within the *Tenable Vulnerability Management User Guide*.
